

Daily Scrum, Sprint Planning, and Reviews and Retrospective

DAY	LOG	DATE	STATUS
1.Planning	During my 2nd sprint, I already shortlisted two backend frameworks which are: Django and Flask. During my planning phase, I reached a consensus that I would choose Flask as my backend framework over Django. Although Django was much easier to deploy since everything was already pre-built, it was a bit complicated for me to understand the nuances of the program. That is why I chose Flask, because flask allows me to build the entire program from scratch and it gives me an avenue to study and understand the nuances of the programs.	Aug 01, 2021	Done
2	I was watching different online tutorials to sharpen my skills.	Aug 02, 2021	Done
3	I was watching different online tutorials to sharpen my skills.	Aug 03, 2021	Done
4	I was watching different online tutorials to sharpen my skills.	Aug 04, 2021	Done
5	I was watching different online tutorials to sharpen my skills.	Aug 05, 2021	Done

6	I started making routes for my backend so that I can start running some html code with flask.	Aug 06, 2021	Ongoing
7	I started integrating the templates(log in and sign in) for my account.	Aug 07, 2021	Ongoing
8	I started making a database for the users. I used sqlite3 for my database since the data I'll be storing will not be too many.	Aug 08, 2021	Ongoing
9	I started making a code that allows the program to authenticate the user whose logging in on the program.	Aug 09, 2021	Ongoing
10	I just continued editing the templates and making it more interactive to the user.	Aug 10, 2021	Ongoing
11	Finalizing	Aug 11, 2021	Done
12	Finalizing	Aug 12, 2021	Done
13	N/A	Aug 13, 2021	Done

Sprint Review and Retrospective

As the product owner, I can say that sprint 3 accomplished the goal that needed to be done. Creating a backend was a bit tedious compared to the previous sprint since I needed to watch more tutorials and familiarize about the nuances of the program. At the same time, creating a video document was also a little bit challenging since my device won't allow me to screen record my browser due to some privacy concerns. So I needed to use a different device in order to document my work on the browser.
